

Campaign	Manipulated	Held fixed	What it settles
E1 concurrency	feeds N : 1, 9, 10, 12	rate, host, plan set	the original question: does broker choice matter?
E-B delay sweep	injected delay 0-50 ms	load, feeds	H1 effect size (direction only; confounded)
E-A / E-A3 load sweep	background load 0-12	rate, feeds, plan	H2 utilisation, H10 mixture, F_{Δ} recovery
E-A2 process count	processes at fixed rate	aggregate event rate	H4 oversubscription
E-C3 / E-C4 stamping	ack stamp: callback vs inline	load, in-flight, backend	H3 asymmetry (replicated)
window sweep	observation window 60-600 s	rate, host, match	start-up cost vs per-event constant
transport (x2)	feeds, powered	verified real-time rate	broker transport, equivalence + shift

Every claim in Section 7 traces to one row. No row both generates and tests the same hypothesis.
